Issues I found

Firstly make sure everything works and for some things that we need to create database table to track or make work please create it .. you can give me the schema and I will run in the database editor

1. When I try to send message to the dieticians it shows this" Message could not be sent. Please try again."

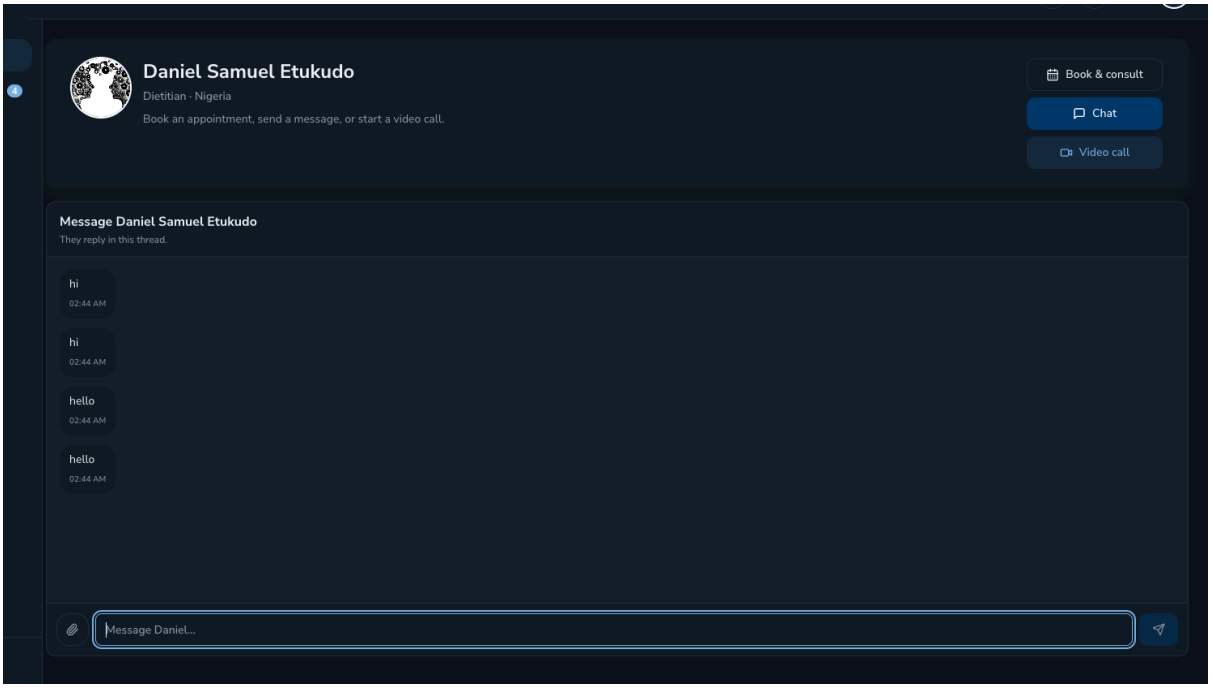

2. As a user when I click on a dietitian image from message place that is ment to take me to their profile it take me to this page I do not know "http://localhost:5173/dietitian/dietitians/d17c8345-5227-4073-9b28-93ce9f1402ec"

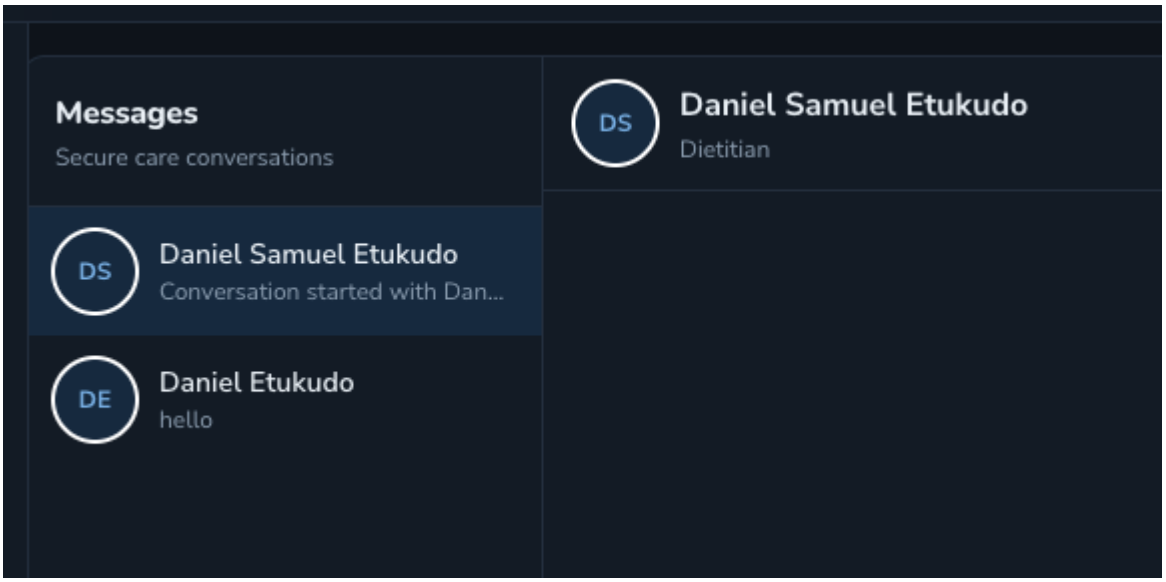

3. It take time before the dietitian profiles show when I am on the discover deticin place and other information across the site ..
4. It takes time before the messages and people I am chatting with show when I am on the message please
5. The appointments does not show on admin end until I refresh the page or browser

6. When I click on chat on the dietitian consultation page it should take me to the message tab and not this tab I am seeing here bellow .. and also I think you should delete the code that made

this page showing cause it is ment to go to the message tab and not this page

7. In the message place the patient cannot see the pictures of dieticians and it is not even sending message

8. I also see that messages from the dietitian part whent to the patient part but still the message was slow to send or even leave the text box and also the patient cannot reply as I told you in 1.

9. For some reasons when I try to do some things I get this “Could not save that change to the server.

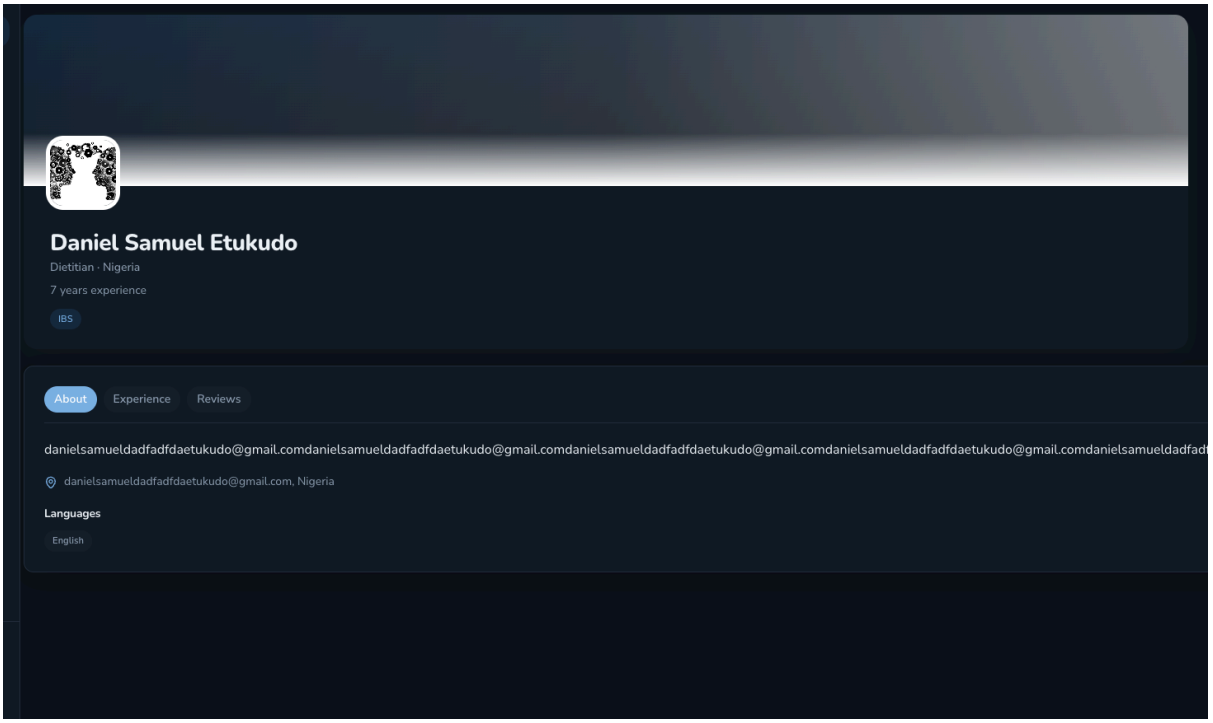

10. Calls is not working so I cannot call from the patient part but the dietitian can call patient

11. Once the dieticina or any other person calls .. the call should end after some time just like how o ther apps ends call and make it a mised call if the person does not pick after some time

12. Even when I tried to pick the call from the patient part the call never worked or connected
13. When a dietitian clicks that an appointment is complete on their side then the patient side shuld also update te status (apointment)to complete

13. The profile of the dietitian (what the patient sees when they click on view profile) the about tab space there is just long and entering into the end of scree n

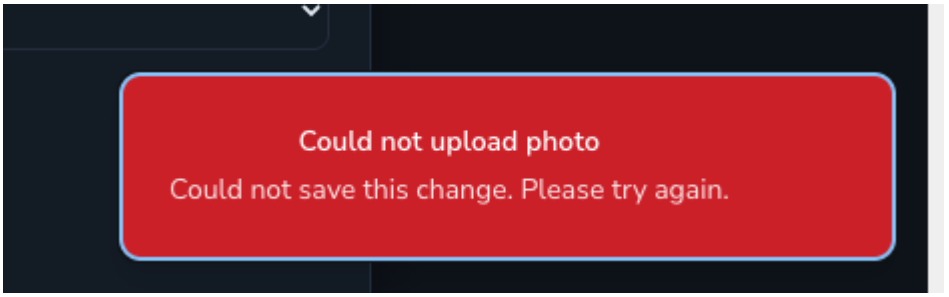

14. When anyone delete an appointment the appointment status should be deleted and not completed

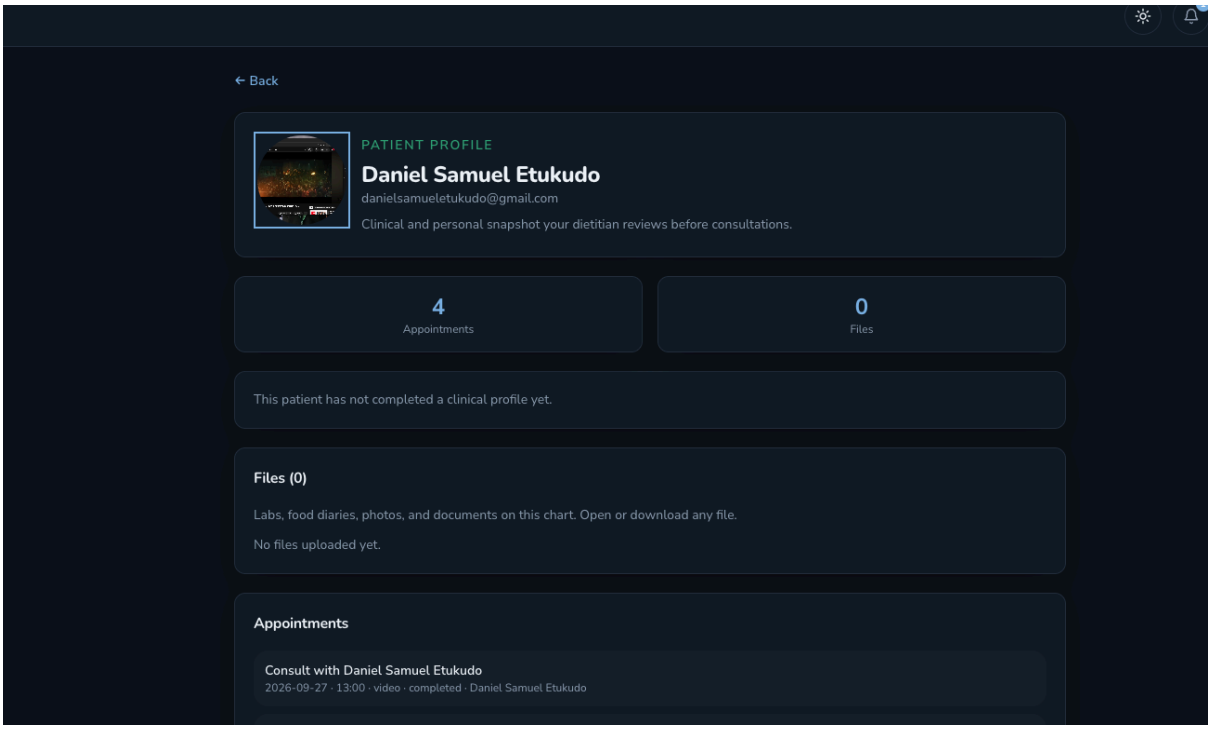

15. On the message part make it possible to delete my chat or message with someone so that with that I can always be able to clear that message place cause now we just have it show and I cannot delete the chat

16.when patient tries to upload picture he sees this ..sometimes and then sometimes it uploads looks like it choosed when to work

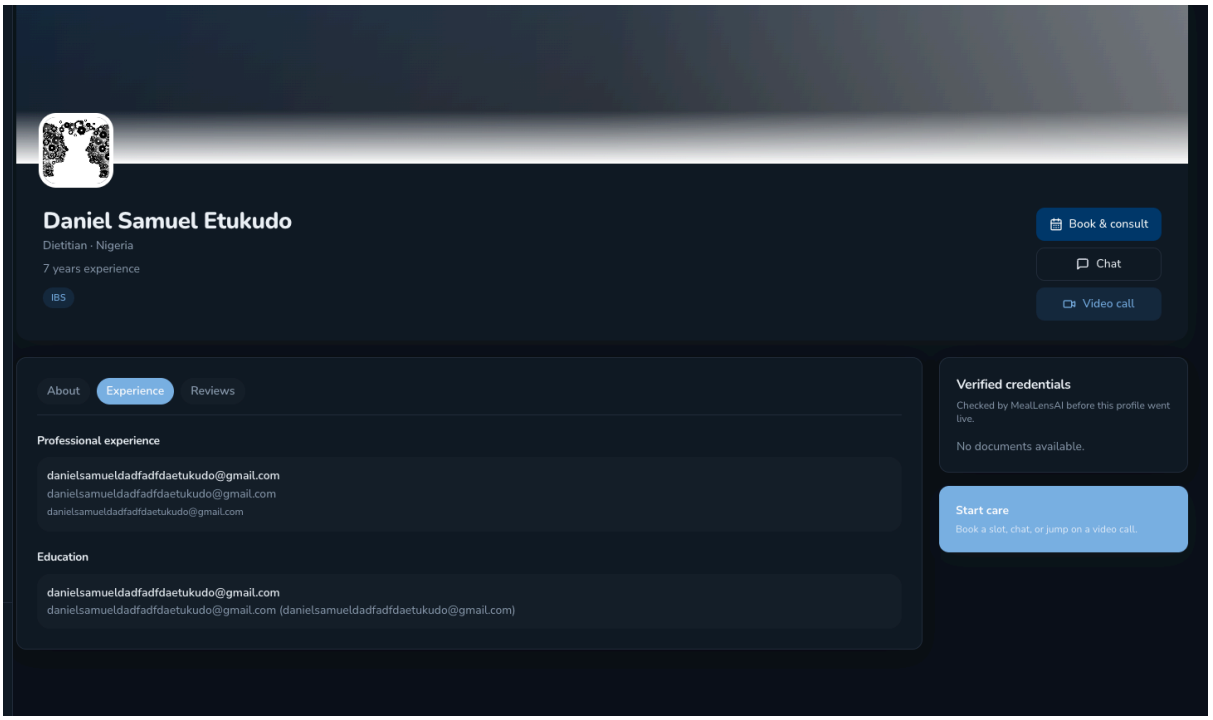

17. The dietitian is unable to view the patient file please make it possible that they can view the files ..it should show on the patient profile

18. When I click a boton across anypart of the website please make sure there is a spin thing cause now I do not know when something is loding after I click ..e.g is like consultation and the rest .. find where we do not have this and fix it

19.. The patient is unable to see the certificatoins of the dietitian please make that to show

20. The user is unable to download the documents shared in the chat please fix that too
