MealLensAI

Marketer brief · Food and nutrition platform

Helping people with chronic conditions know what to eat, cook it at home, stay consistent, and see a verified dietitian.

CONFIDENTIAL · FOR MARKETING USE

What we do, who we serve, and every live feature

Use the approved pitch below as the public story. Everything after it is what the product actually does today, so ads, landing copy, and partnerships stay accurate.

Approved pitch

Are you living with diabetes, high blood pressure, ulcers, or another health condition where food really matters?

Maybe you're wondering what to eat, looking for affordable, verified nutritionists and dietitians, or just struggling to stick to healthy meals.

Meet MealLensAI, your all-in-one food and nutrition platform.

Get personalized meal ideas, ingredients, and cooking instructions based on your health needs. Connect with verified nutritionists and dietitians, create weekly meal plans, track your meals, and find affordable options based on your location and budget.

Scan ingredients in your kitchen and get meals you can prepare.

MealLensAI helps you eat healthier and access nutritionists and dietitians from the comfort of your home.

What we are

MealLensAI is a food-and-nutrition platform for people whose health depends on what they eat. It does two jobs in one place:

- **Tell you what to eat for your condition** — then help you cook it and stick to it.
- **Connect you to a verified dietitian or nutritionist from home** — consult, follow-ups, chat, and files.

Hospitals tell people to eat better. They do not make it easy to do every day. MealLensAI turns "eat healthy" into meals, recipes, a weekly plan, and optional professional care.

> *One-liner: MealLensAI helps people with diabetes, high blood pressure, ulcers, and other conditions know what to eat, cook it at home, stay consistent, and see a verified dietitian without leaving home.*

The problem we solve

People with chronic conditions already know they should eat better. The hard part is doing it.

- Every day starts with “what should I eat for my condition?”
- Meal plans feel like chores.
- Cooking takes time and energy.
- Affordable, verified dietitians are hard to find.
- Advice from a hospital visit does not become food on the plate.

> *Line we use: Hospitals don’t solve adherence. MealLensAI does.*

We are not a hospital, not a pharmacy, and not a grocery app. We are the daily food layer between a diagnosis and actually eating right.

Who it’s for

Primary customer

- People living with diabetes, high blood pressure, ulcers, and other conditions where food matters.
- People who want affordable, verified nutritionists and dietitians at home.
- People who struggle to stick to healthy meals.

Also in the product

- Verified dietitians and nutritionists who apply, get listed, and see patients.
- Clinics, hospitals, and wellness orgs that invite members and generate meal plans for them (B2B — pitch separately).

Do not sell as live products: insurance packages or wellness-chef software. Those appear as “who it’s for” on the site, but they are not products a customer can buy today.

How it works

- **Share your health profile** — condition, age, gender, height, weight, activity, location.
- **Get Food for you** — meals matched to that condition, ready to cook.
- **Plan the week** — generate a 7-day plan, then tick off meals as you cook them.
- **Scan your kitchen** — photo or type what’s there, get meals you can make now.
- **Cook with guidance** — step-by-step instructions, plus video tutorials and articles.
- **See a specialist (Silver / Gold)** — book a verified dietitian, then follow-ups, chat, and video from home.

Conditions

Lead with: diabetes, high blood pressure, ulcers, and more.

Users can type their own condition. The AI personalizes to whatever they enter. The dietitian directory can also be searched for diabetes, IBS, PCOS, heart disease, celiac, obesity, and hypertension.

Do not list extra conditions as “officially supported” unless they are on the landing page.

Full feature list

1. Health profile

Age, gender, height, weight, waist, activity level, health condition in the user's own words, and a goal (heal, improve, manage, restore, or maintain), plus country. This drives Food for you, weekly plans, and location meals. When a plan is generated, users can see waist-to-height ratio, BMR, and a daily calorie target. For dietitian visits, a fuller clinical profile can include allergies, medications, diet preferences, physician, clinic, and lifestyle details.

2. Food for you

The first place to look when someone has a condition and needs to know what to eat. Personalized breakfast, lunch, dinner, and snacks with photos, calories, protein / carbs / fat, and why the meal helps their condition. Tap any dish for cooking instructions. Users can regenerate new ideas.

3. Scan your kitchen

Take a photo of the fridge or ingredients, or type a list. MealLensAI detects ingredients, flags items that may affect the user's condition, and suggests meals they can actually prepare — each with macros, a health benefit, and cooking steps.

4. Weekly meal plans

A 7-day plan covering breakfast, lunch, dinner, and snack. Create one by typing ingredients, uploading a photo, or auto-generating from the health profile. Users can save plans, switch weeks, filter by meal type, and see condition-aware nutrition on each card.

5. Meal tracking

Mark each meal as cooked. A weekly progress bar shows that they are sticking to the plan.

6. Location and budget

Pick a week, country, and weekly budget. Currency follows the country (Kenya → KES, Nigeria → NGN, US → $). The plan uses ingredients that are realistic for that place and budget, so "eat healthy" stays affordable.

7. Cooking instructions

Every personalized dish can open a recipe with step-by-step instructions, video tutorials, and recommended articles.

8. History

Past scans, Food for you results, and meal plans can be reopened or deleted.

9. Verified dietitians and nutritionists

Silver and Gold only. Bronze is AI tools only. Patients can browse a directory of admin-verified specialists; search by name, country, specialty, or condition; open a profile (about, experience, credentials, reviews); leave a review; and book a date and time on the specialist's calendar. The first visit is a consultation; later visits are follow-ups. The appointments list covers upcoming and completed visits, with join video, message, and cancel. The app includes video calls, chat with attachments, health-file uploads (labs, food diaries, photos) with access control, and in-app notifications.

Visit limits: Silver — 1 dietitian at a time, 1 consultation + 2 follow-ups. Gold — 1 dietitian at a time, 1 consultation + 6 follow-ups.

10. Dietitian and nutritionist side

Specialists apply with bio, country, experience, specialties, workplace, languages, and education, plus a profile photo, practice license, and two degrees. Admin review happens before they appear to patients. They set weekday availability and can see patients, charts, appointments, messages, files, and incoming consult requests, and run video calls on the same platform.

11. Account and everyday extras

Email signup and login, forgot and reset password, start free with no card for the 3 free meal plans, profile photo and password, light and dark mode, settings for time zone, call reminders, notifications, and camera/mic defaults. Payments are via Paystack.

12. Clinics and organizations (B2B, separate)

Not part of Bronze / Silver / Gold. Clinics, hospitals, individual doctors, nutritionists, and wellness centers can invite members, create accounts, generate meal plans and Food for you for a member, see member food history and health information, and optionally set time windows for when members can use the tools. Pitch this to clinics, not to everyday consumers.

Pricing

Plan	Price	What they get
Free	$0	3 full 7-day meal plans. Scanning, recipes, condition meal planning. No dietitian.
Bronze	$10 / month	Unlimited AI meal tools, location & budget, health info and history. **No marketplace dietitian.**
Silver	$20 / month	Everything in Bronze + 1 dietitian, 1 consultation + 2 follow-ups, calendar.
Gold	$50 / 3 months (was $60, 20% off)	Everything in Silver + 1 consultation + 6 follow-ups. Best value.

No credit card required to start free. Cancel anytime. Patients subscribe to MealLensAI; they do not pay the dietitian separately in this model.

Proof you can use

Standly, diabetes. Blood sugar 9.8 → 6.5 in one week after following the meal guidance. He didn't overhaul his life; he followed the meals.

Chinyere, high blood pressure. Followed the generated plan, felt better day to day, and finally had a way to eat right she could stick with.

Use as customer stories, not as a medical claim or clinical trial.

Lines that work

"Super food platform for people with chronic conditions"

"Eating right for your condition shouldn't feel like a chore"

"When you wonder what to eat for your condition, MealLensAI is the answer"

"Get Food for you, cook with clear instructions, and build weekly plans that fit your health, budget, and life"

"Connect with verified dietitians and nutritionists from home"

"Scan what's in your kitchen, then cook it step by step"

"Hospitals don't solve adherence. MealLensAI does"

"Start free"

What not to claim

Do not claim	Why
We replace a hospital or prescribe drugs	MealLensAI is food, cooking, and optional dietitian care — not a clinic or pharmacy.
Bronze includes a dietitian	Bronze is AI meal tools only. Marketplace access starts at Silver.
A timed 7-day or 14-day free trial	Free is 3 meal plans, not a calendar trial. No card needed to start.
Unlimited dietitians or unlimited visits	One dietitian at a time. Silver: 1 consult + 2 follow-ups. Gold: 1 consult + 6 follow-ups.
Patients pay the dietitian directly	Patients subscribe to MealLensAI packages.
Grocery lists, family sharing, calendar export, or "scan a plated dish"	Those are not in the live app. Live scan is ingredients in the kitchen.
Insurance or wellness-chef software as a product	Mentioned as audiences on the site, not products a customer can buy today.
Extra named conditions as officially supported	Lead with diabetes, high blood pressure, ulcers, and more. Users can type their own condition.

Suggested ways to talk about it

For ads and social

Living with diabetes, high blood pressure, or ulcers? MealLensAI tells you what to eat, helps you cook it, and connects you to a verified dietitian from home.

For partnerships

MealLensAI is the adherence layer after a clinic visit: personalized meals, weekly plans that fit budget and location, cooking guidance, and optional verified dietitian consults.

For dietitians

Get verified, listed, and see patients through MealLensAI — availability, booking, video, chat, and files in one place.
